

Founded in 1968, Tessiltoschi fabrics manufacturer has always done its best to satisfy the customer's requirements based on two principles:

1. Continuous, capillary commercial collaboration and constant assistance to its clientele.
2. Proposals and production of textile marked by a high ratio flanked by price and technical qualitative features.

The first target is pursued thanks to a capillary selling network, based on a territorial organization, made up of area agents and direct sales managers who follow the customer during all the production stages and order managing, starting from production up to the relative delivery.

The second target is pursued through an internal technical structure made up of various managers for each specific product, continuously looking for new fabrics to propose. At the same time, it is regarded fundamental to understand the customer's requirements and express these into saleable textiles.

Fondata nel 1968, la Tessiltoschi ha sempre avuto come obiettivo fondamentale il soddisfare le esigenze del cliente basandosi su due principi:

1. Affiancamento commerciale ed assistenza costante, continua e capillare ai propri clienti.
2. Proposta e produzione tessuti contraddistinti da un elevato rapporto tra prezzo e caratteristiche tecnico qualitative.

Il primo è perseguito grazie ad una capillare rete di vendita, organizzata su base territoriale, con agenti di zona e responsabili commerciali diretti che assistono il cliente durante tutte le fasi di lavorazione e gestione dell'ordine, dalla produzione dei tessuti e stoffe fino alla spedizione degli stessi.

Il secondo obiettivo è perseguito attraverso la disponibilità di una struttura tecnica interna composta da diversi responsabili di prodotto, tesa a proporre continuamente nuovi tessuti; contemporaneamente, è considerato fondamentale recepire le esigenze del cliente da tradurre in stoffe vendibili.

TESSILTOSCHI K18, KEEP YOUR FEET SAFE !

Tessiltoschi has developed a new range of antiperforation materials.

These fabrics are the most recent development of the K18™ fabrics line, which has been used for many years inside the safety shoes replacing the steel

insole. These new antiperforation fabrics, have been developed to guarantee an improved resistance in case of accidental perforation by nails.

Due to their special technical structure these fabrics guarantee antiperforation following tryouts according to several standards.

The advantages for safety shoes having K18™ are the following:

- additional comfort - flexibility and breathability
- appropriate dissipative for manufacturing of shoes in ESD

	THICKNESS	VARIATIONS	COMPOSITION	VALUES
K18.0/2 ZERO TYPE PS	4.0 mm	dissipative and insulating	100% PL	five perforation test values have resulted in an average of 1.210 N

	THICKNESS	VARIATIONS	COMPOSITION	VALUES
K18.0/2 ZERO TYPE PL	4.0 mm	dissipative and insulating	100% PL	five perforation test values have resulted in an average of 1.300 N
K18.0/2 ZERO TYPE PL 	3.8 mm	dissipative and insulating	75% PL GRS 25% PL	five perforation test values have resulted in an average of 1.300 N
